SKILLS

- Development**  
Python · JavaScript · React · Node.js · PostgreSQL · Docker
- UX/UI & Design**  
Figma · Design System · Prototyping · Appflow
- Networking**  
IPv4/IPv6 · VLAN · OSPF · ACL · Site-to-site VPN
- Embedded & IoT**  
C/C++ · Arduino · ESP32 · Sensors
- Cybersecurity**  
Wireshark · Nmap
- AI & Data**  
LLMs · RAG · AI Agents · Fine-tuning · Scikit-Learn

LANGUAGES

French — native  
English — B1

1. IDENTITY / POSITIONING

DANIEL BENI MPODOL WELISAN

Telecommunications Engineering Student — Fullstack Developer · Frontend & UX/UI · AI Engineer

3rd-year engineering student at SUP'PTIC, I'm interested in technologies that design, connect and run systems. As a fullstack developer (JavaScript and Python), I specialize in frontend, UI/UX and user experience (appflow), backed by a solid grounding in networking, embedded/IoT systems and cybersecurity from my telecom training. I'm currently taking part in the AMD AI Academy Challenge (LabLab.ai × AMD), which extends my profile into AI engineering (LLMs, RAG, agents).

2. EXPERIENCE

**INTERN — CAMTEL** July – September 2026  
*Fraud Prevention Unit · Littoral Regional Delegation, Fixed Business Unit · Bepanda, Douala*  
Designed the user experience (UX/UI) and developed the frontend of CarburFlow, paired with a teammate, for the Fraud Prevention Unit.

**PARTICIPANT — AMD AI Academy Challenge** September – December 2026  
*LabLab.ai × AMD*  
Three-month individual challenge on GPU-accelerated AI development: LLMs, RAG, AI agents, MCP, multimodal AI, fine-tuning.

**FREELANCE FULLSTACK DEVELOPER** 2023 – present  
*Self-employed*  
Design and development of custom fullstack web applications for various clients.

3. EDUCATION

**SUP'PTIC — Yaoundé** 2024 – present · 3rd year  
*Telecommunications Engineering — Computer Science & Networks*

**Lycée de Biyem-Assi** 2024  
*High School Diploma, Science track (Baccalauréat C)*

4. CERTIFICATIONS

**Web Development** 2023  
*TiC Foundation — 6-week bootcamp (HTML, CSS, JavaScript, Node.js)*

**Robotics, Electronics & IoT** 2022  
*TiC Bootcamp (TiC Summit) & TME Education — Arduino, electronics, robotics*

5. PROJECTS

**CARBURFLOW** July – September 2026  
*Frontend Lead & Fullstack Developer | UX/UI · Delivered internship project*  
Monitoring platform for fuel levels and consumption across multiple sites, with anomaly detection (leaks/theft). Owned the user experience, interface and client-side application flow (appflow).  
*Technologies: React · UI/UX · PostgreSQL · Docker*

**SYNTRA** 2026  
*Lead Fullstack Developer | Private inter-company communication*  
Platform built on a site-to-site VPN tunnel, letting a company communicate freely and securely with its branch offices, or several companies exchange privately over an encrypted channel, without the cost of a traditional carrier link.  
*Technologies: Fullstack development (JS/Python) · VPN networking*

**SUPONEAI** February – May 2026  
*Frontend Lead & UX Developer | SUP'PTIC Chatbot (paired)*  
Intelligent assistant to query a knowledge base of 1,000+ Q&A pairs via semantic search. Owned the conversational interface.  
*Technologies: React · UI/UX · Django · Scikit-Learn*
